SP.546 If $a, b, c \in (0, 1)$ then:

$$\sqrt{3a - a^2} + \sqrt{5b - b^2} + \sqrt{7c - c^2} \leq \sqrt{15(a + b + c) - (a + b + c)^2}$$

Proposed by Daniel Sitaru – Romania

Solution 1 by proposer

Let be $x, y, z > 0$ such that:

$$\frac{a}{3} = x; \frac{b}{5} = y; \frac{c}{7} = z$$

$$\begin{aligned} & \sqrt{3a - a^2} + \sqrt{5b - b^2} + \sqrt{7c - c^2} = \\ &= \sqrt{9\left(\frac{a}{3} - \frac{a^2}{9}\right)} + \sqrt{25\left(\frac{b}{5} - \frac{b^2}{25}\right)} + \sqrt{49\left(\frac{c}{7} - \frac{c^2}{49}\right)} \\ &= 3\sqrt{\frac{a}{3} - \left(\frac{a}{3}\right)^2} + 5\sqrt{\frac{b}{5} - \left(\frac{b}{5}\right)^2} + 7\sqrt{\frac{c}{7} - \left(\frac{c}{7}\right)^2} \end{aligned}$$

Let be $f: (0, 1) \rightarrow \mathbb{R}; f(x) = \sqrt{x - x^2}$

$$f'(x) = \frac{-1}{4\sqrt{x-x^2}(x-x^2)} < 0 \Rightarrow f \text{ concave}$$

By Jensen's inequality:

$$f\left(\frac{3}{15}x + \frac{5}{15}y + \frac{7}{15}z\right) \geq \frac{3}{15}f(x) + \frac{5}{15}f(y) + \frac{7}{15}f(z)$$

$$15f\left(\frac{3x + 5y + 7z}{15}\right) \geq 3f(x) + 5f(y) + 7f(z)$$

$$15\sqrt{\frac{3x + 5y + 7z}{15} - \left(\frac{3x + 5y + 7z}{15}\right)^2} \geq 3\sqrt{x - x^2} + 5\sqrt{y - y^2} + 7\sqrt{z - z^2}$$

$$3\sqrt{x - x^2} + 5\sqrt{y - y^2} + 7\sqrt{z - z^2} \leq 15\sqrt{\frac{3x + 5y + 7z}{15} - \left(\frac{3x + 5y + 7z}{15}\right)^2}$$

$$\sqrt{9x - 9x^2} + \sqrt{25y - 25y^2} + \sqrt{49z - 49z^2} \leq$$

$$\leq \sqrt{225\left(\frac{3x + 5y + 7z}{15} - \left(\frac{3x + 5y + 7z}{15}\right)^2\right)}$$

ROMANIAN MATHEMATICAL MAGAZINE

$$\begin{aligned}
& \sqrt{3 \cdot 3x - (3x)^2} + \sqrt{5 \cdot 5y - (5y)^2} + \sqrt{7 \cdot 7z - (7z)^2} \leq \\
& \leq \sqrt{15(3x + 5y + 7z) - (3x + 5y + 7z)^2} \\
& \quad \sqrt{3a - a^2} + \sqrt{5b - b^2} + \sqrt{7c - c^2} \leq \\
& \leq \sqrt{15(a + b + c) - (a + b + c)^2}
\end{aligned}$$

Solution 2 by Marin Chirciu-Romania

$$\sqrt{3a - a^2} + \sqrt{5b - b^2} + \sqrt{7c - c^2} \leq \sqrt{15(a + b + c) - (a + b + c)^2}$$

Using CBS inequality, we obtain:

$$\begin{aligned}
LHS &= \sqrt{3a - a^2} + \sqrt{5b - b^2} + \sqrt{7c - c^2} = \sqrt{a}\sqrt{3-a} + \sqrt{b}\sqrt{5-b} + \sqrt{c}\sqrt{7-c} \stackrel{CBS}{\leq} \\
&\stackrel{CBS}{\leq} \sqrt{(a+b+c)(3-a+5-b+7-c)} = \sqrt{(a+b+c)(15-a-b-c)} = \\
&= \sqrt{15(a+b+c) - (a+b+c)^2} = RHS
\end{aligned}$$

Observation: $a, b, c \in (0, 1) \Rightarrow \sqrt{a}, \sqrt{b}, \sqrt{c} > 0$ and $\sqrt{3-a}, \sqrt{5-b}, \sqrt{7-c} > 0$

Equality holds if and only if $\frac{a}{3-a} = \frac{b}{5-b} = \frac{c}{7-c} \Leftrightarrow \frac{a}{3} = \frac{b}{5} = \frac{c}{7}$

Remark: The problem can be developed.

If $a, b, c \in (0, 1)$ and $x, y, z \in (1, \infty)$ then:

$$\sqrt{xa - a^2} + \sqrt{yb - b^2} + \sqrt{zc - c^2} \leq \sqrt{(x+y+z)(a+b+c) - (a+b+c)^2}$$

Marin Chirciu

Solution: Using CBS inequality, we obtain:

$$\begin{aligned}
LHS &= \sqrt{xa - a^2} + \sqrt{yb - b^2} + \sqrt{zc - c^2} = \sqrt{a}\sqrt{x-a} + \sqrt{b}\sqrt{y-b} + \sqrt{c}\sqrt{z-c} \stackrel{CBS}{\leq} \\
&\stackrel{CBS}{\leq} \sqrt{(a+b+c)(x-a+y-b+z-c)} = \sqrt{(a+b+c)(x+y+z-a-b-c)} = \\
&= \sqrt{(x+y+z)(a+b+c) - (a+b+c)^2} = RHS
\end{aligned}$$

Observation: $a, b, c \in (0, 1) \Rightarrow \sqrt{a}, \sqrt{b}, \sqrt{c} > 0$ and $\sqrt{x-a}, \sqrt{y-b}, \sqrt{z-c} > 0$

Equality holds if and only if $\frac{a}{x-a} = \frac{b}{y-b} = \frac{c}{z-c} \Leftrightarrow \frac{a}{x} = \frac{b}{y} = \frac{c}{z}$.

Note: For $x = 3, y = 5, z = 7$ we obtain Problem SP.546 from RMM Nr. 37 – Summer 2025
